Description

Foreman-Version: 1.13.3, Debian Jessie 8.7, Installed via foreman-installer

I have a host called "news.example.com" when i click "Edit", it opens as usual
"https://foreman.example.com/hosts/news.example.com/edit".
Clicking save renders an error: (from the logs)

2017-01-21T23:29:08 4ec4b48a [app] [I] Started PATCH "/hostss.example.com/edit" for 10.242.2.2 at 2017-01-21 23:29:08 +0100

2017-01-21T23:29:08 4ec4b48a [app] [F]	ActionController::RoutingError (No route matches [PATCH] "/hostss.example.com/edit"):	lib/middleware/tagged_logging.rb:18:in `call'

it seems, that there happens a string replace for "/new" (because of /hosts(..)s.example.com)

if you need any more Information, i am glad to help!

#11761 appears to have relaxed the regexp in submit_with_all_params(), it no longer has an end anchor.
