

Foreman - Feature #18205

Provide useful macros for templates and save_to_file helper

01/23/2017 03:00 PM - Marek Hulán

Status:	Closed	Fixed in Releases: Found in Releases: Red Hat JIRA:
Priority:	Normal	
Assignee:	Marek Hulán	
Category:	Templates	
Target version:	1.15.0	
Difficulty:		
Triaged:	No	
Bugzilla link:		
Pull request:	https://github.com/foreman/foreman/pull/4216	
Description		
Looking at community templates we often repeat code around @host.operatingsystem, it's family, version, name. Another macro that would be handy is for storing the content into a file using cat << EOF > target. Ideally Foreman core should provide helpers that provides shortcuts for these, raise meaningful errors, DRY up the code between multiple templates, are testable and improve the template readability.

Only non-host related macros are being accepted before we have proxy objects. Therefore only save_to_file will be addressed with the PR. When we have proxy objects, I'll convert those macros to host proxy methods.
