Description	
When I create a new instance on Openstack, I should get a dropdown menu with flavor sorted by size instead of alphabetical order.	
In foreman I have in order : medium / large / tiny /xlarge / small In OpenStack I have in order : tiny / small / medium / large / xlarge

- Status changed from New to Feedback

This is a feature, not necessarily a bug. Basically, the values are set to be sorted alphabetically. I am looking now to see if it's possible to just not handle the sorting and then have OpenStack take over from there; if that works I will submit a PR.
