Difficulty:	Fixed in Releases:
Triaged:	Found in Releases: 1.14.0
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
Having specified a Smart Class Parameter Matcher with only the "network" attribute in the order list, we are unable to create a host-specific override for that parameter.	
/var/log/foreman/production.log: 2017-01-27 08:51:09 6f6e3e2c [app] [I] Failed to save: Match fqdn does not exist in order field	
Adding the "fqdn" attribute to the order list of the global Smart Class Parameter, enables us to save host-specific overrides for the parameter again.	
Wondering if this behaviour is intended or not.	
This seems related to: http://projects.theforeman.org/issues/17238

I was too fast in making conclusions. It does save, but the YAML dump shows that the host-specific override still doesn't work.

There are no apparent errors or warnings found in /var/log/foreman/production.log when retrieving YAML dump for the host.

Please disregard this comment, it works when "fqdn" attribute is ordered above "network" attribute. **doh**
