Description

Hi,

I am trying to provision CentOS7 from foreman but unable to start the installation and am receiving "Warning: Failed to fetch the kickstart file", but i can access the file / URL without any issue. Kindly check the attached images and kindly assist me to complete the centos7 provisioning.

Am using "Foreman Version 1.12.1", with the same provisioning template and partition table i can successfully complete the centos6.8 installation, but unable to complete for CentOS7 Provisioning (i can attach my provisioning template file if its required).

Regards,
Ranjithkumar.T
