Description

Currently, we use a pool of 5 workers in the foreman-tasks to handle the incoming requests. At large scale, this might not be enough. For start, we should be at least able to set the number of works via config file/installer

As a workaround, one would need to edit `pool_size` in initialize method of

```
/opt/theforeman/tfm/root/usr/share/gems/gems/foreman-tasks-*/lib/foreman_tasks/dynflow/configuration.rb
```

and after changing the size, restart the foreman-tasks service
