

Foreman - Bug #18493

PXE loader is not inherited from parent hostgroup

Pull request:	
Description UI does not populate PXE loader dropdown with value from parent hostgroup. I have not tested if API is affected as well. Steps to reproduce: 1) Create hostgroup A with all fields filled in in 'Operating System' tab 2) Go to new hostgroup page 3) select A as a parent and move to 'Operating System' tab 4) there is 'Inherit parent (no value)' in PXE loader dropdown even though parent has a non-empty value for this field
