Description

Hi,

I'm filling this ticket as a result of a discussion with mmoll on IRC.

Foreman 1.13.0 from git.

When choosing OS for the new host we are seeing much more operating system entries than we have in database .
This behaviour started probably after unmanaging approx. 300 hosts.

```
mmoll | jindraj: feels to me as the filling of the dropdown with data is the problem - I assume th
e operatingsystems page in the UI looks like the ERB output
```

- rails console dump: http://pastebin.com/raw/Ke0KYRzS
  That's the same what is in foreman database in the operatingsystems table.

- I appended a screenshot to this issue showing how chooser for operating systems looks like.

This is first issue I am reporting here on the foreman redmine. If there is some missing information just tell me. I'll do my best to
provide everything needed.

EDIT1:

```
23:37:44        mmoll | jindraj: oh, now that I'm seeing the screenshot... the nodes you unmanaged are EC2
nodes?
23:39:37      jindraj | mmoll: yep
23:40:00        mmoll | allright, please add that to the issue then, I think the issue might originate from
 the connection between the AMI and the OS
```
