History

#1 - 02/17/2017 03:03 AM - Dominic Cleal

Which version of the smart proxy are you using? The log doesn't look recent. You need at least version 1.12.0, preferably 1.14.x.

#2 - 02/21/2017 12:41 PM - Neeraj Harikrishnan

I am using foreman 1.12. I am still running on centos 6.8 and hence cannot upgrade to Foreman-1.14. I cannot reproduce the above error anymore. I tried to reinstall foreman-proxy 1.12 and have gotten into a different dependency problem now.

Now the problem is I cannot install smart proxy

```
Error: Package: foreman-proxy-1.12.4-1.el6.noarch (foreman)
Requires: rubygem(sinatra)
You could try using --skip-broken to work around the problem
You could try running: rpm -Va --nofiles --nodigest
```

```
[root@saba3 tmp]# gem list
```

```

If I should be creating a new ticket for the above issues please advice and feel free to close this one.

Thanks in advance for the help

Neeraj

#3 - 02/21/2017 02:17 PM - Neeraj Harikrishnan

So it turns out rubygem-sinatra-1.0 is no more available in epel repository and foreman-proxy still expects to see it. I fortunately had a local copy of the rpm and am up and running again. This rpm should probably be added to foreman.repo

Please feel free to close this ticket.

Neeraj
