Description

The patch prsposed on blog entry (http://blog.theforeman.org/2012/05/ec2-provisioning-using-foreman.html)
http://pastie.org/4002125 doesn't work.
With this modification proposed by ohad '<%= select_f f, :subnet_id , vpcs, :id, :cidr_block, {}, :label => "VPC" %>'
I get this in debug mode :

@Romain, do you have the latest patch that worked? IMHO the only thing left here is to have a logic choosing which ip address to use (public vs private) for ssh

Here is the paste that I use in production : http://pastie.org/5078094

For +super.merge({ :ip => :private_ip_address }) this is related to #1879

Romain Vringnaud has submitted a commit request that looks promising but I am having trouble getting it to merge with 1.2.
app/views/compute_resources_vms/form/_ec2.html.erb fails to render and only one of four VPC subnets appear in the network tab. Romain thinks
the problem comes from the recently added multi-nic support. Any ideas on what change this commit would need to work with 1.2?

Any progress on this? We would really like to use this feature in a project that is coming up soon.

Glen, there hasn't been any progress that I'm aware of, so removing the 1.2 tracker. If somebody is able to rebase the patch, we can include it in a future release.

This is something that would be really helpful to us if it worked. I don't think I have the Ruby skills however, to rebase this patch myself.
