Description

As per [#18618](#), the dynflow executor is moving over to Foreman, in order to support ActiveJob. Tasks will provide an UI and persistence layer for Dynflow, but Foreman should be able to run jobs without it too.

Part of this effort includes moving the Dynflow executor over to Foreman, which at the moment is managed by the foreman-tasks service.

Associated revisions

Revision ee1b7b47 - 01/15/2018 09:19 AM - Ewoud Kohl van Wijngaarden

Fixes #18757 - Handle dynflow service in foreman core

The dynflow service was moved into core with 1.17. That renamed it to
dynflowd and means the service should be started by default.

For compatibility parameters are provided. This means we must move the
service name detection to the jobs.pp file because that's the only place
we know the actual value.
