

Foreman - Bug #1877

When generating PXE config file HTTPS is not used in the generated URL

10/01/2012 11:06 AM - Rytis Sileika

| Description | |
| I have this in my PXE default template: | |
| <pre><%= foreman_url("provision") %></pre> | |
| I also run Foreman with Passenger and nginx with SSL. | |
| When a new PXE configuration is generated, the URL has http:// in it (should have https://). | |
| When I generated the PXE config (ie did 'build' on the host) I was on https://&lt;foreman host> URL. | |

History

I was too trigger-happy with this: Anaconda doesn't support https anyway, so adding https wouldn't make much sense.

Closing the ticket now.
