Description

Thin provisionning is always used.

I choose eager zero for disk provisionning in foreman (see VM-Capture-onprovisionning.PNG).

Once provisionned i can see that it comes to thin provisionning in foreman(VM-Capture-provisionned.PNG)

The Vmware view confirm that is in thin provisionning (VM-Capture-onvmware.PNG in french)

Is duplicate of Foreman - Feature #14716: Provision thick disks from thin tem...	**Closed**	**04/19/2016**

History

#1 - 03/16/2017 04:47 AM - Emerik NICOLE

- File VM-Capture-templates.PNG added

templates is in eager zero

#2 - 03/16/2017 04:57 AM - Dominic Cleal

Are you using image/template provisioning or network/PXE provisioning?

#3 - 03/16/2017 04:58 AM - Dominic Cleal

- Is duplicate of Feature #14716: Provision thick disks from thin templates added

#4 - 03/16/2017 04:58 AM - Dominic Cleal

- Status changed from New to Duplicate

Ah sorry, I missed your comment. This has been implemented in ticket #14716 for Foreman 1.15.0. Please try out the release candidates when available, or nightly packages.
