<div>Description</div> <div>Since the release of capybara 2.13.0, the following test fails on develop:</div> <div><div>ComputeResourceIntegrationTest#test_0003_compute resource password doesn't deleted while test connection [/home/dcleal/code/foreman/foreman/test/integration/compute_resource_test.rb:23]:</div><div>Expected: "123456"</div><div>Actual: nil</div></div> <div>It passes under 2.12.1. It appears to rely upon editing a disabled password field, which is probably the fault, as the value of the field isn't updated when it's filled.</div>

fixes #18950 - enable password field in CR form test

Prior to capybara 2.13.0, the test passed despite filling in a disabled password field, but a change now prevents this odd assumption. The test now enables the field via the provided button, also requiring JS.
