tfm-rubygem-fog-libvirt.noarch        0.2.0-1.el7                     @foreman
tfm-rubygem-ruby-libvirt.x86_64      0.5.2-4.el7                     @foreman
```

Note the installed ruby-libvirt version, 0.5.2.

```
[root@myserver foreman-proxy]# cat /usr/share/foreman-proxy/bundler.d/libvirt.rb
group :libvirt do
  gem 'ruby-libvirt', '>= 0.6.0'
end
```

The version mismatch is likely the cause why there are failures in libvirt modules.

yum install rubygem-ruby-libvirt for the (optional) dependency. These providers are not intended for use in production installations (i.e. with RPMs), only development instances.

Works for me, thanks.

#3 - 05/23/2018 09:36 PM - Rahul Bajaj

I think this bug is still valid. I am facing this in the development environment.

#4 - 05/24/2018 06:04 AM - Ondřej Pražák

If you have a devel proxy, bundle install should get you the gems you need - at least for me it does. Do you have any additional details? Comment 1 solved it for me in production.
