| **Target version:** | | | |
| **Difficulty:** | | **Fixed in Releases:** | |
| **Triaged:** | | **Found in Releases:** | |
| **Bugzilla link:** | | **Red Hat JIRA:** | |
| **Pull request:** | https://github.com/rubiety/validates_lengths_from_database/pull/17, https://github.com/rubiety/validates_lengths_from_database/pull/18 | | |

**Description**

This leads to unexpected validatoin errors such as "OperatingsystemTest.test_: Operatingsystem should not allow :major to be ‹"111111"›."
in tests, depending on options of other ActiveRecord objects and order of their loading.

It hit us hard in remote_execution

## History

**#1 - 04/28/2017 03:52 AM - Ivan Necas**

*- Pull request https://github.com/rubiety/validates_lengths_from_database/pull/18 added*

**#2 - 05/03/2017 06:07 AM - Dominic Cleal**

*- Status changed from Ready For Testing to Resolved*

Not a Foreman issue, changed in a gem.
