Katello - Bug #19473

Docker CV Filters need to work with the Schema 1/ Schema 2 changes

Description

As of pulp 2.13 every repo we sync will have 2 different schema versions.
This means if user wants to say "Exclude 1.26", we probably need ask the user "1.26 of what schema version"

More over we probably need filters that say "exclude all tags belonging to schema v1"

Including both schema types for a tag is desirable.
