

Foreman - Bug #1974

Tests should run with a different cachedir

Description Currently the caching in tmp/ can cause the testsuite to affect production. The following scenario will reproduce the issue: 1) Create a Host in the UI 2) View the Host's PXELinux template - observe that foreman_url() creates the right url (using Settings[:foreman_url]) 3) Run the tests (or at least functional/unattended_controller_test.rb) 4) Refresh the template view - the url will now have "http://test.host" instead of the correct value. This seems to be because all running environments (including test) share the same cachedir. Tests should probably cache to test/tmp/
