

Foreman - Refactor #19917

SSH key deletion does not error out

06/05/2017 06:19 AM - Lukas Zapletal

Status:	New	Fixed in Releases: Found in Releases: Red Hat JIRA:
Priority:	Normal	
Assignee:		
Category:	Compute resources	
Target version:		
Difficulty:		
Triaged:	No	
Bugzilla link:		
Pull request:		
Description		
<p>When delete of a SSH key fails, it is not reported to the UI controller and it is shown as success. This has a consequence - when SSH key is Redeployed (using the UI button) and deletion fails, result error is Error: Compute resource has already been taken</p> <p>We should fix both by redesigning how this works, it's a little bit clunky in the code.</p>

One more thing, I noticed that we do not care about output coming out from the request in delete_key_from_resource, we should totally investigate if that was at least HTTP 200. OpenStack for example can return non-200 response.
