Foreman - Feature #2008

Switching context should redirect to resource index instead of showing 404

Description

If I'm on /hosts/foo.example.com and I switch
my org / location context.
If the host or any other resource is no longer available in that
context, IMHO we should be redirected to /hosts (or any resource type list)
instead of showing staying in /hosts/foo.example.com and showing a 404
error message
