| Description | |
| <p>The foreman vhost template needs the certificates that puppet::server creates.</p> <p>Currently, the paths to the ssl certificates are also hardcoded (this should be changed too). I already have some code in place to workaround this, but it depends heavily on having the include puppet::server before foreman. This due to how puppet 'precompiles' templates.</p> | |

History

#1 - 02/27/2014 04:59 PM - Benjamin Papillon

- Description updated

- Status changed from New to Closed

As discussed on IRC, this refactor has been done.
