Pull request:			

Description

The default kickstart template could do with a refresh so it uses more modern system defaults, e.g.

- LVM, ext4
- or autopart for some OS version agnostic defaults?
- %end markers
- `services --disabled=`
- remove --enablemd5 from authconfig (use SHA-2)

And the pxelinux template:

- deprecated boot options, e.g. ksdevice= in F17/18

History

#1 - 01/02/2013 10:21 AM - Dominic Cleal

The release number of the EPEL RPM occasionally changes, so instead of installing it with an exact URL, add a repo and install epel-release in %packages, e.g.

```
repo --name="Extra Packages for Enterprise Linux" --baseurl="http://ftp.nluug.nl/pub/os/Linux/distr/fedora-epe
l/6/x86_64/"
```

(suggestion from Ewould)

#2 - 02/27/2013 01:49 PM - Brian Rak

ksdevice is still useful in EL6, it probably shouldn't be removed from that.

#3 - 05/23/2013 06:03 PM - Dominic Cleal

- Status changed from New to Assigned

- Target version set to 1.2.0

- Assignee changed from Dominic Cleal to Anonymous

#4 - 05/24/2013 09:48 AM - Anonymous

ready for testing: https://github.com/theforeman/foreman/pull/650

#5 - 06/04/2013 01:04 PM - Dominic Cleal

https://github.com/theforeman/community-templates/pull/13 has been merged, the shipped templates should now be updated to match. Don't migrate existing ones, we should just refresh the defaults under app/views/unattended/ for newly migrated installs.
