

Foreman - Feature #2039

Add a note to hosts created on a compute resource

Description vCenter allows a VM to contain additional notes to describe the VM. This is reflected on the summary page for the VM. It would be nice if Foreman added a note telling the vCenter operator that the VM should be managed through Foreman. This prevents operators from deleting the VM and causing Foreman not being able to delete the host because the compute resource id can not be found anymore.

- Category set to VM management

Sounds like a nice feature to reduce confusion when managing a VMware compute resource where all the VM's aren't created through Foreman.
