Description

It will be great to have a "button", that will provide a capability to bulk deletion of puppet classes with blank environment.
For example I deleted whole environment from disk, than ran Import modules from smart proxy, foreman deleted environment, but I got a huge list of the old puppet modules.
Thank you

Hello,

First, sorry for answering this late. Can you provide us with more informations on what you want to do? For ex. is it just an UI issue if you import classes/environments from puppet and you wish to not display all classes related to the deleted environment? Did I understood correctly?

Regards

I meant to upvote this instead. Misclicked.

What I believe he means is for an easy way (like a simple button) to purge old Puppet modules/classes that have been deleted from an environment and are not in use anymore. Currently those stay in the overview of Puppet classes but don't have any environment assigned to them anymore.

This would indeed be a great feature as a little bit of clean up.
