

## Foreman - Bug #2048

### Subnet not selectable for new host when no orgs/locations exist

12/14/2012 07:39 AM - Dominic Cleal

<b>Status:</b> Resolved

<b>Pull request:</b>	
<b>Description</b>	
Locations and organizations are enabled in settings.yml, however no org or location has been created.	
When using the New Host page, Network tab, select a Domain from the dropdown and no Subnet is listed for selection. It works correctly if locations and orgs are disabled.

so what would you expect? that the form is disabled (e.g. subnets) until an Org/Location have been selected?

My understanding is that if there are no orgs or locations defined (not selected) that Foreman would act as if the features were disabled. Is that correct, or a bad assumption?

The new host form allows me to select a domain (which isn't associated with an org or location), but then doesn't allow selection of a subnet (which also isn't), so seems inconsistent.

If the app shouldn't function until an org and location has been defined, it should be clearer (a bit like the splash screen before data is loaded).

- Status changed from New to Resolved

this is actually resolved as part of the major work around taxonomies Joseph did.
