Foreman - Feature #2049

Allow removal of host when not found in VCenter

Description

It seems I cannot delete a host from Foreman when it's been provisioned on VMware and no longer exists in the VMware stack. I get a message about failing to destroy and "ActiveRecord::RecordNotFound." I think it would be great if you allowed removal of hosts when this occurs. Obviously if the host does not exist in VMware it's no longer needed in Foreman. This could be a bug, but it's most likely a feature request.

Hello,

With the yet to be released 1.5 version, you will be able to decorrelate the VM from the Compute Ressource, allowing a normal deletion on Foreman. Please keep us informed of your tests :)
