Foreman - Bug #2060

Can't filter for ancestor hostgroups in the host list

Description

When I'm filtering hosts according to hostgroups I would expect the "hostgroup ~ foo" to match hosts that has foo in their ancestry, not just in their last hostgroup name.

E.g. if a host is in these hierarchical hostgroups: foo/bar/baz - we can only search or match for baz now, foo or bar is completely invisible in the filtering.

Please add this functionality. If you don't want to break or modify previous searches, add something like "fullhostgroup" to search according to that.

Thanks,
A.

- Status changed from New to Resolved

This is possible using "hostgroup_fullname ~ foo".
