

Foreman - Bug #2068

puppet:import:puppet_classes silently fails to import classes that have a parameter called "notify"

12/20/2012 12:02 PM - David Schmitt

Status: Rejected	
Priority: Normal

Pull request:	
Description	
the import task will silently ignore the following class:	
<pre>class icinga(\$notify) { }</pre>	
but will happily import	
<pre>class icinga(\$notification) { }</pre>	
I'm guessing this is due to the clash with the notify metaparameter, but still, an error message or warning would be really great :-)	

History

Actually I think we can widen this a little in scope - the importer will silently discard any class with syntax error - if Puppet can't parse it, the proxy will ignore it. We should probably warn about that.
