Description	
error: unpacking of archive failed on file /usr/share/foreman/public: cpio: rename	
This error is caused by following the instructions on this link and then updating foreman via yum. http://theforeman.org/projects/foreman/wiki/Setting_up_Nginx_plus_Passenger	
The solution is simple, leave the default symlink /usr/share/foreman/public alone, but that breaks Nginx which doesn't like the symlink as a root folder.	
So the work around (for me) to upgrade foreman via yum was	
1. Backup old public folder (just in case). mv /usr/share/foreman/public /usr/share/foreman/public.<version>	
2. Re-create the symlink ln -s /var/lib/foreman/public /usr/share/foreman/public	
3. Remove any failed symlinks from the RPM install. rm /usr/share/foreman/public\;50d7629d	
4. Perform the RPM update yum update foreman	
5. Revert the public folder back for Nginx (as per the instructions in the above link) rm /usr/share/foreman/public cp -rp /var/lib/foreman/public /usr/share/foreman/	
6. Restart your services service nginx restart service foreman restart	
Maybe there is a way to make Nginx operate happily from a symlink rootdir, if so then someone please update the document in the link above.
