Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1275749

1. Proposed title of this feature request

- [RFE] To enhance Satellite to allow additional LDAP authentication sources (Non-POSIX LDAP Server)

4. Why does the customer need this? (List the business requirements here)

- Customer uses Tivoli Access Manager as authentication and authorization solution, with Tivoli Directory Server as its LDAP. User accounts with their passwords are provisioned in Tivoli Directory Server. Using this LDAP is mandatory for any application which needs authentication based on username and password and authorization based on access groups. They have other third-party tools installed in their systems which cope well with TDS.

History

#1 - 09/15/2017 06:13 AM - Marek Hulán

- Subject changed from Support authentication with Tivoli LDAP server to Support authentication with Tivoli LDAP server

- Category set to Authentication
