Foreman - Bug #2097

Improve debug when unable to get Puppet settings with bad return code

01/03/2013 06:09 AM - Dominic Cleal

Description

Currently PuppetSetting raises an exception when the return code of the puppet master --configprint command is bad. This is usually down to configuration, but there's not enough debug to help.

It currently raises this message:

```
unable to get [:hostcert, :localcacert, :hostprivkey, :storeconfigs] Puppet setting: &lt;stdout&gt;
;
```

It should also provide the path to puppetmasterd it ran (as people have had $PATH issues), the full command (to include the puppet.conf location) and stderr.
