Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1477015

Description of problem:

A non-admin user with viewer role or 'view_provisioning_templates' permission is only able to see the list (name) of provisioning templates and unable to see the template box or details of the provisioning template.

How reproducible: (Always)

Steps to Reproduce:

1) Create a non-admin user and assign 'Viewer' role to it or assign a custom role having 'view_provisioning_templates' permissions filter added to it.

2) From Satellite web interface navigate to 'Hosts' -> 'Provisioning templates'.

3) Click on the name of any provisioning templates being listed.

Actual results:

No action takes place and provisioning template details are not opened.

Expected results:

The template box or details of provisioning template should be visible with read only permission.

This is true for all resources, not just provisioning templates. Users with view_* permission can only see the index in the UI currently, not any resource details.
