

Foreman - Bug #20990

Mousing over a tooltip with full org name in org selector closes org selector

Description Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1417946	
Description of problem: Long organization names are shortened in org selector, mousing over them shows the tooltip above that org with full org name. The thing is, when you mouse over that tooltip (not just to read the full name, but you may simply want to select another org which is above the one with long name) - tooltip becomes in focus, which is treated as not a part of org selector, that's why selector closes. Can be pretty annoying issue from customer perspective, which also hits our automation - automation can't select organization above the one with long name, as selector closes immediately.	
How reproducible: Always	
Steps to Reproduce: 1. Make sure you have any org with pretty long name (more than 32 chars i guess, let's say it name is 50 chars long) 2. Open org selector, mouse over previously mentioned org. 3. Try to mouse over any organization above previously mentioned.	
Actual results: Org selector immediately closes	
Expected results: The tooltip with full org name should be treated as a child of org selector, org selector should not close when that tooltip is in focus.
