Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link: 1391222	Red Hat JIRA:
Pull request:	
Description	
Description of problem: The Puppet CA's expire 5 years after creation	
How reproducible: Always	
Steps to Reproduce: 1. Install Foreman 2. Wait 5 years	
Actual results: Certs are expired	
Expected results: Certs are expired, but we provide a method to renew them	
Additional info: Typically, users regenerate the CA and re-sign all the certs. Not very nice if you have a lot of clients. There's something here about renewing it by reverse engineering the CSR: https://gist.github.com/kbarber/6456420
