<b>Description</b>	
Hi,	
when buildint VSphere VMs in Foreman, the virtual boot CD created, uploaded and connected to the new VM by foreman stays connected after the installation has finished.	
This prevents the new VM to be vMoted from one ESX host to another. Or so at least my Vmware people say.	
The boot CD should be disconnected from the VM and probably even deleted from the VMware Datastore once the installation has finished.	
Greetings Marc
