Foreman - Bug #21292

Users authenticated via external sources (Kerberos) contain no default context/location

Description

Upon login using an 'external' user (IdM, via REMOTE_USER). The user cannot do anything. I've even attempted to specify an external group, but there is no context/location settings in the external group settings.

I was expecting it to be fixed but it wasn't. My current workaround is to use a foreman hook on user/after_create to modify taxable_taxonomies table.

```
foreman=# select id,login,auth_source_id from users where id = 38;
id |     login       | auth_source_id
----+-------------------+---------------
38 | satellite-new-user |           3
(1 row)
foreman=# select id,type,name from auth_sources where id =3;
id |      type       |   name
----+-------------------+----------
3 | AuthSourceExternal | External
(1 row)

foreman=# select * from taxable_taxonomies where taxable_id = 38 and taxable_type = 'User';
id | taxonomy_id | taxable_id | taxable_type | created_at | updated_at
----+-------------+-----------+--------------+-----------+-----------
(0 rows)
```

Expected results:
Organization/location are assigned on creation.

```
foreman=# select id,taxonomy_id,taxable_id,taxable_type from taxable_taxonomies where taxable_id = 38 and taxable_type = 'User';
id  | taxonomy_id | taxable_id | taxable_type
-----+-------------+-----------+--------------
894 |         1 |        38 | User
895 |         2 |        38 | User
(2 rows)
```
