#5 - 11/15/2012 05:53 PM - Joshua Hoblitt

Per discussion in #puppet-dev with samkottler and Dominic, we believe this is a request for the ability to add additional yum/apt/etc. repositories, beyond just the installation media, to the provisioning script. At my current site, for \$::osfamily = redhat, we have hard coded repos for epel, puppet, etc. in the kickstart provisioning script. It would be nice for this to be dynamically configurable via foreman and would allow (some day) katello to push pulp mirror information into foreman.

#6 - 07/31/2013 08:17 AM - Ohad Levy

- Status changed from New to Closed

work in progress, see https://github.com/theforeman/foreman_content

Closing this, new feature requests should go to the new content project
