

## Foreman - Bug #21315

### Katello: Deleting repository from product leaves product in Candlepin database

10/12/2017 07:46 PM - John Beranek

<b>Pull request:</b>	
<b>Description</b>	
<p>I was tidying my Katello 3.4.5 installation, deleting old no longer used repositories, and the first repository deleted fine, but when I tried to delete the next one, it got stuck halfway through the deletion with a Candlepin error about the product referring to the repository I just deleted. This was:</p>	
<pre>Katello::Errors::CandlepinError: Runtime Error product references content which does not exist: ContentData [id: 1481545184271, name: CentOS-7.3-x86_64-extras, label: Acme_Corp_CentOS_CentOS-7_3-x86_64-extras] at org.candlepin.controller.ProductManager.applyProductChanges:658</pre>	
<p>Looking at the Candlepin DB I found that this repository was still referred to in cp_content:</p>	
<pre>e3e38602bba447dba0e2bf398b13b3a0   1481545184271   2016-12-12 12:19:44.271+00   2016-12-12 12:19:44.271+00   /custom/CentOS/CentOS-7_3-x86_64-extras     Acme_Corp_CentOS_CentOS-7_3-x86_64-extras   1   CentOS-7.3-x86_64-extras     yum   Custom     0</pre>	
<p>but this repository had already been removed from Pulp.</p>	
<p>So, it looks like the repository deletion isn't fully completing for some reason.</p>
