

Foreman - Bug #21434

Compute Resource's Associate VMs associates ALL accessible VMs in VCenter not just the ones in this Datacenter

10/23/2017 05:07 PM - Daniel Kimsey

Status:	New	
Priority:	Normal	
Assignee:	Chris Roberts	
Category:	Compute resources - VMware	
Target version:		
Difficulty:	medium	Fixed in Releases:
Triaged:	Yes	Found in Releases: 1.15.2
Bugzilla link:		Red Hat JIRA:
Pull request:		
Description		
<p>I created a Compute Resource, named after the corresponding Datacenter "Elk Dev". The user/account I provided has access to other Datacenters at the VCenter.</p> <p>After creation, I select Associate VMs.</p> <p>The Virtual Machines tabs correctly shows only VMs in the Elk Dev datacenter.</p> <p>However, the Hosts page shows every VM in this VCenter to now be linked to Elk Dev, even though their cluster's are Elk Production and Elk Corp.</p> <p>As a user I expected the Associate VMs to only associate VMs in my Datacenter "Elk Dev", not all accessible Datacenters from the given VCenter url.</p> <p>This came about as we were setting up provisioning. The side-effect of associating all VMs resulted in someone deleting a production VM by accident.</p>
