

Foreman - Bug #21769

Parameter Overrides Changed By Unrelated Actions

11/27/2017 01:57 AM - Stephen Hames

Status:	New	Fixed in Releases: Found in Releases: 1.15.6 Red Hat JIRA:
Priority:	High	
Assignee:		
Category:	Web Interface	
Target version:		
Difficulty:		
Triaged:

Pull request:		
Description		
<p>Certain actions in the UI seem to cause parameter overrides become escaped. This does not happen consistently, but we can reproduce across different client operating systems/browsers.</p> <p>When I change the "environment" or "OS" of a host the parameters seem to be reloaded, and escape characters, as well as newlines are added into the text fields in the foreman web UI.</p> <p>Depending on the affected parameter, I may then be unable to submit the changes, as format validation fails on the changed parameter.</p> <p>Worse - in some cases it allows the change, which could in some circumstances result in unintended config changes on the managed host.</p> <p>The workaround I have to apply at moment is to manually copy out each of the affected overrides, then change environment or operating system of the managed host, then copy back again.</p>
