Foreman - Bug #2178

VMware - Cluster and asociated datastores

Description

When I want to provision a host using vmware compute ressource, I see a problem in the Virtual Machine tab.

I can choose for a specific cluster and also the datastore.

In our organisation, we have datastores associated with a cluster, so we were expecting to see only the datastores for the selected cluster, while we see all of them … from all clusters.
Since we have a lot of DS, it adds complexity.

Bug discovered with Foreman 1.1RC5

Yes I am aware of it, and it was just a lake of time on my side.

will try to fix it within the 1.1-stable branch.

Crap, you did not had the time ...
I tried to add the feature myself but it is definitively not something for me :-)

I hope to have this feature asap ;-)
