

Foreman - Bug #2189

Problem searching for host params "inherited" from the hostgroup

02/07/2013 02:45 PM - Oscar Ferrer

Status: Duplicate

Pull request:	
Description	
I've found this problem (at least) in 1.1RC5 and 1.1	
How to reproduce it:	
<ul style="list-style-type: none">- Create a hostgroup A with a parameter foo=bar,- Create a hostgroup B whose parent is A.- Create a host foreman-rules and assign B as its hostgroup.- Now search for all the host that match param.foo=bar (using the web interface for instance). You will get an empty list.- Overwrite foo param in hostgroup B or in host foreman-rules, the search works perfectly.	
It seems that I can only search for params that are defined in the host or in the hostgroup that it's assigned but not deep in the hostgroup hierarchy.

hi there,

I can confirm this.

I can also say that this is not only for parameters but for any search. My problem is the search for puppet classes.

If Hostgroup A has class C and is the parent of Hostgroup B.

And if Host H is member of Hostgroup B.

If you then search for "class = C" the result does not include Host H.

#2 - 04/11/2013 02:13 PM - Dominic Cleal

- Category set to Search

This is a very similar issue to what is described in [#1804](#).

#3 - 03/28/2014 11:48 AM - Dominic Cleal

- Is duplicate of Bug #2871: Foreman scoped_search on hosts params only search for boolean parameters added

#4 - 03/28/2014 11:49 AM - Dominic Cleal

- Description updated

- Status changed from New to Duplicate

This has been fixed in Foreman 1.3.0 via [#2871](#).
