Description

I installed the 1.1 foreman repo (http://yum.theforeman.org/releases/1.1/el6/x86_64/foreman-release-1.1stable-1.el6.noarch.rpm)

But when checking the foreman.repo, I can see that it still points to the development tree.

[foreman]
name=foreman
baseurl=http://yum.theforeman.org/development/el6/$basearch
gpgcheck=0
enabled=1

[foreman-source]
name=foreman-source
baseurl=http://yum.theforeman.org/development/el6/source
gpgcheck=0
enabled=0

I changed "development" into "releases/1.1" to get the correct version. But not everyone will spot this.

History

- Assignee set to Sam Kottler

#2 - 02/11/2013 07:09 AM - Sam Kottler

- Status changed from New to Assigned

Sorry about this - I'll update the package this morning with the proper baseurl.
