Description	
<p>Hi,</p> <p>I was having problems by adding multiple hash values, after submitting it was going to list of classes, but in fact it was not saving the hole data.</p> <p>The problem was I had the same (duplicate) \$title for 2 values like below.</p> <pre>nofile: value: "1048576" domain: "-" item: nofile ensure: present type: soft nofile: value: "1048576" domain: "-" item: nofile ensure: present type: hard noprocs: value: "2048" domain: "-" item: nproc ensure: present type: soft</pre>	
<p>It worked by changing to different \$titles - nofile and nofile1</p> <p>Could you please add checks to not proceed to the class list and show some warning message ?</p> <p>Thanks</p>
