Foreman - Bug #2227

hostgroup disappeared (maybe deleted) and has not tracks in the audit log

Description

I'm looking for a hostgroup in my foreman instance, there are some hosts that appear as belong to that hostgroup but the hostgroup doesn't exist anymore - I can't find it in the list of hostgroups, even not by search-by-name, when editing a host that belongs to the aforementioned hostgroup - the hostgroup field is empty.

I'm trying to find out what happen with that hostgroup, I've searched the hostgroup name in the audit log and I could only find its creation, I would expect to find its deletion or renaming but there is no such audit entry, so I'm not sure whether the issue is the hostgroup disappearance, it might be the audit log's absence/search.

Do you have Locations/Organizations enabled in your deployment? could it be that you are not admin and the hostgroup is not in your scope (e.g. org/location)?

#2 - 02/20/2013 02:55 AM - Rami Vaknin

It's probably not a real issue - but missing permissions to my user, could you please close this bug?
