Description	
<p>This is yet another taxonomy issue caused by what users can and cannot see when inside a scope.</p>	
<p>Steps to reproduce:</p>	
<ol style="list-style-type: none">1) log in as admin2) create john as an admin with no location/organization3) assign john as an owner of some-host.example.com (host is in Default Organization/Default Location)4) create beth with manager role in Default Organization/Default Location5) log out, log in as beth6) edit some-host.example.com, go to 'Additional Information' tab7) notice john is not set as owner (dropdown has a blank value set) and is not available in dropdown selection8) Hit the submit when owner dropdown has empty value selected, revisit 'Additional Information' again9) beth is now owner of some-host
