History

#1 - 01/29/2018 12:58 PM - Johannes Black

- translation missing: en.field_release set to 332

#2 - 04/03/2018 10:36 AM - Daniel Lobato Garcia

- translation missing: en.field_release deleted (332)

#3 - 04/03/2018 01:06 PM - Ewoud Kohl van Wijngaarden

- Project changed from Kafo to Installer

Could you share a bit more? Which version of foreman-installer, which options were used (the answer file might be useful to have but feel free to scrub hostnames and usernames/passwords).

#4 - 04/03/2018 02:41 PM - Johannes Black

I have upgraded to Foreman 17 RC2 where there are other problems which are reported as well. I think you can close it right now.

I will check out the to be released RC3 for problems that might persist.

Greetings and thanks

jb

#6 - 05/25/2018 02:08 PM - Eric Hansen

Same error, occurs after adding the option --foreman-proxy-puppetca=false to the following installation request. I had run with that option true successfully yesterday, but had problems and was reverting it.

```
foreman-installer --scenario foreman-proxy-content \  
--foreman-proxy-content-parent-fqdn "eh-katello.qa.catalogic.us" \  
--foreman-proxy-register-in-foreman "true"
```

```
--foreman-proxy-foreman-base-url      "https://eh-katello.qa.catalogic.us"\
--foreman-proxy-trusted-hosts        "eh-katello.qa.catalogic.us"\
--foreman-proxy-trusted-hosts        "atm-infrastructure-smartproxy-6861.qa.catalogic.us"\
--foreman-proxy-oauth-consumer-key   "xxx"\
--foreman-proxy-oauth-consumer-secret "xxx"\
--foreman-proxy-content-certs-tar    "/root/atm-infrastructure-smartproxy-6861.qa.catalogic.us.tar"\
--puppet-server-foreman-url          "https://eh-katello.qa.catalogic.us" \
--foreman-proxy-puppet=false \
--foreman-proxy-puppetca=false \
--enable-foreman-proxy \
--foreman-proxy-tftp=true \
--foreman-proxy-tftp-servername='10.1.100.61' \
--foreman-proxy-dhcp=true \
--foreman-proxy-dhcp-interface='ens192' \
--foreman-proxy-dhcp-gateway='10.1.100.248' \
--foreman-proxy-dhcp-range='10.1.100.10 10.1.100.60' \
--foreman-proxy-dhcp-nameservers='10.1.100.61' \
--foreman-proxy-dhcp-subnets='10.1.100.0/255.255.255.0' \
--foreman-proxy-dhcp-option-domain='automation.local' \
--foreman-proxy-dhcp-search-domains='automation.local' \
--foreman-proxy-dhcp-pxeserver='10.1.100.61' \
--foreman-proxy-dns=true \
--foreman-proxy-dns-interface='ens192' \
--foreman-proxy-dns-zone='automation.local' \
--foreman-proxy-dns-reverse='100.1.10.in-addr.arpa' \
--foreman-proxy-dns-server='10.1.100.61' \
--foreman-proxy-dns-forwarders='172.20.40.10'
```

My log snippet showing the error,

```

```

#7 - 05/25/2018 02:09 PM - Eric Hansen

I'm running katello 3.6 (underlying 1.17.0)

#8 - 05/25/2018 02:20 PM - Eric Hansen

Attempted to resolve by adding --no-enable-puppet, same error

This is probably some compatibility issue with the default proxy installation settings not working... trying to make a smart proxy without puppet, using the main katello server for that purpose.
