This leads to a problem when plugin want to define its own notification builder like this

```
module UINotifications
  module RemoteExecutionJobs
    class BaseJobFinish < ::UINotifications::Base
```

That ends up with following error

```
/home/ares/Projekty/Zdrojaky/foreman_remote_execution/app/services/ui_notifications/remote_execution_jobs/base_job_finish.rb:3:in `<module:RemoteExecutionJobs>': uninitialized constant UINotifications::Base (NameError)
