<b>Description</b>	
The Foreman should be localizable. Ideally, it would create po files which can be submitted to tools such as transifex or zanata.	

#### Associated revisions

##### Revision 69be1641 - 03/03/2013 12:52 PM - Bryan Kearney

fixes #2269 - Add gettext framework to foreman.

This patch adds a gettext based localization framework to the Foreman. This is done by adding the fast\_gettext and gettext\_i18n\_rails gems along with their dependencies. An example translation is done to the login page and the users controller.

Next steps, once this patch is merged, is to begin to internationalize new pages and pages which are touched during enhancements. Then, the strings can be exported to a translation tool such as transifex or zanata.
