Pull request:	
Description	
Spice (similar to noVNC) has an html 5 based client(javascript).	
Foreman should be allowed to use that in a similar fashion to noVNC, where users who are not lucky to run firefox&linux can use it.	

Associated revisions

Revision 8ffd9aee - 03/04/2013 07:01 AM - Ohad Levy

fixes #2277 - adds spice html5 support

This also adds a newer version of the web socket proxy (where we probably need to use an external package instead of vendor it).

we still allow users to use the old XPI based spice client (which would ensure end to end security as well) via a 'new window' button. that window would only be allowed currently if you are on firefox on linux.
